

- High performance off-line oil cooling and filtration systems for cooling hydraulics or gear drives.
- Heat transfer rating from 0.25 to 1.4 kW/°C using hydraulic or gear oil, contact sales office for suitability with very high viscosity oils viscosity.
- Internal relief valve for protection against over pressure or accident.

VCL6XAC4DP40

APPLICATION. These units are most effective as an add on for hydraulic circuits as well as cooling gear drives. The most common application is for hydraulic circuits where there are sudden oil flow changes with cylinders where flow surges and spikes from cylinder operation do not allow the use of the cooler in the main circuit due to the risk of cooler element damage. Use of this type of cooler with its own separate circuit will avoid this problem. Please contact our sales office to have your application reviewed.

PUMP PRESSURE. Pump delivery pressure to 5 bar. Higher pressure ratings available. Consult factory.

PERFORMANCE RANGE. Heat transfer range is from 0.25 to 1.4 kW/°C of ETD. Performance is based on ISO 68 hydraulic oil at 30cSt, for other fluids and viscosities please contact our sales office. ETD is the difference between the entering oil and the cooling air temperature.

CONNECTION. VCL models are equipped with oil delivery hose from oil pump to cooling element. Please contact our sales office if the pumping head is greater than 10m or you have any special requirements. Pump inlet must be flooded.

OTHER MODELS AVAILABLE. We also supply models with other types of cooling elements for special applications.

DC32YH6AC4HL75

Not available at time of publication.

Heat transfer rating kW/°C ETD is for Mineral Oil with operating viscosity less than 100 cSt.

* Noise levels listed are raw A weighted @ 1 metre representing worst case. Refer noise level statement page 63.
